

Fall Pest Problems

Fall sees many pest problems as the weather cools and pest pressure increases for occasional invaders.

01 BOXELDER BUGS

In autumn, boxelder bugs become gregarious and congregate on the south side of rocks, trees and buildings where the sun hits.

02 STINK BUGS

Adult stink bugs enter homes and other structures searching for overwintering sites. The stink bug earned its name from its tendency to release an odor when disturbed or when crushed.

03 RODENTS

Mice can squeeze through an 6mm opening, about the size of a pea and love what your home or business provide . . . shelter, warmth, food and water.

04 LADY BEETLES

Lady beetles can be a nuisance when they fly to buildings in search of overwintering sites and end up indoors. Once inside they crawl about on windows, walls, attics, etc.

Call 800-650-PEST today for expert control of these and other pests!
